BRIEF INDUSTRIAL PROFILE OF THE NILGIRIS DISTRICT 2015-16

1. General Characteristics of the District:

Nilgiri district popularly known as the “Blue Mountains” is a tiny district, with an area of 2545 sq.km, forms an integral part of the Western Ghats was a part of Coimbatore district till 1868. In August 1868 the Nilgiris was separated from the Coimbatore District and brought under the control of a Commissioner. In February 1882, the Nilgiris was made a district and a Collector was appointed in the place of the Commissioner. The District forms part of the Western Ghats in western Tamil Nadu, at the junction of Karnataka and Kerala states in Southern India. Over 2,700 species of flowering plants, 160 species of fern and fern allies, countless types of flowerless plants, mosses, fungi, algae, and land lichens are found in the sholas of the Nilgiris.

39% of the land in Nilgiris is used for agricultural purposes. The Nilgiris District is basically a Horticulture District and the entire economy of the district depends upon Horticulture Crops like Potato, Cabbage, Carrot, Tea, Coffee, Spices and Fruits. The main cultivation is plantation Crops, viz., Tea and Coffee. Potato and other vegetables are raised in Udhagai and Coonoor Taluks. Paddy and Ginger are grown in Gudalur and Pandalur Taluks. Paddy is also grown in Thengumarahada area in Kotagiri Taluk. Besides these crops, Ragi, Samai, Wheat, Vegetables etc., are also grown in small extent throughout the district.

1.1 Location and Geographical Area:

The Nilgiris is situated at an elevation of 900 to 2636 meters above MSL. Its latitudinal and longitudinal dimensions being 130 KM by 185 KM. The Nilgiris is bounded on North by Karnataka State on the West by Coimbatore District, Erode District, South by Coimbatore District and Kerala State and as the East by Kerala State. The geographical area of the District is 2565 Sq.km.

Soils have been defined as a thin layer of earth's crust which serves as a natural medium for the growth of plants. The soil formation may be classified into four varieties viz., alluvial soil, laterites soil, black soil, and red soil. The district is prone to landslides and soil erosion during heavy rains. The major types of soil in the district are sandy loam, red loamy soil, and black soil seen in the dam and riverbed areas.

Iron ores in Nilgiris are of the variety called Magnesite, Quartzite and the main occurrences are situated in the triangular belt between Devala, Pandalur and Devarshola. Minor occurrences are found in the North West of Muthumalai also. Low-grade bauxite with alumina content varying from 32 to 48% occurs in Parsons Valley and Wenlock downs area near Udhagamandalam.

A total area extent of 1,78,900 sq.m with a maximum thickness of 6m of primary bauxite and 1,70,000 sq.m of detrial bauxite have been located in these areas. In Kotagiri Taluk bauxite deposits are seen near Kotagiri, Kercambai and Elada areas, a total reserve of 0.18 million tonnes with 40% and 12.03 content has been estimated in these areas. Some of the bauxite from Kotagiri is being utilized by the A.C.C Cement Factory at Madukkarai. Muscovite Mica is seen in a number of pegmatite in Gudalur Taluk.

About 10 mines are present in Cherambadi area of the Taluk. A few workable deposits of Muscovite mica of 15 -20 cm. across in size occur in the pegmatite near Bokkapuram, Chembanattam, Pandalur, and Cherambadi. The dolerate dyke rocks which are otherwise called as Black Granite are concentrated in the upper Bhavani area. A thin rein of Magnesite is available at Thengumarahada in Moyar valley. Probable reserves of 1, 00,000 tonnes were estimated up to 20-M depth
