Brief Industrial Profile of Ahmednagar District

1) General Characteristics Of The District:

Ahmednagar district, which is known to be the 'Place of Saints', is located between Pune and Aurangabad on road line and between Manmad and Daund on railway line. It is the largest district in area in Maharashtra comprising 14 taluka places. Ahmednagar district is on the fore-front in co-operative movement in the country owing to the strong presence of 16 Sugar factories, distilleries, spinning mills, paper mills, milk federation, dairy etc. in the co-operative sector and a few co-operative industrial estates. The district has well road network connecting it to all the mega markets in the country. It can be said that the district is the 'Gateway' of Marathwada and Vidarbha to Mumbai. The north belt of the district is richer in water resources with the help of Godavari and Pravara rivers and south belt is dry land except few spots in Shrirampur and Parner.

1.4) Soil:

The entire district is occupied by basaltic lava flows, which are popularly known as 'Deccan Traps'. These lava flows are some times associated with inter trapper beds such as limestone, clay, shale, red bole beds, porous thin mantle of black cotton soil present almost everywhere on the basalts. River alluvial sand, gravel, clays and silts represent the recent deposits in the district.

Calcareous concretions and Nodules known as Kankar is commonly associated with the soil.

1.5) Rivers:
