## **Brief Industrial Profile of Mandya District**

### **1. General Characteristics of the District**

The soil in the district is not known for its original fertile quality. Its water holding quality is low because of its highly bleached red sandy loam interspersed with some red clay loams. This poor quality of the soil is however made good to some extent by a well planned irrigation system which ensures perennial water supply to agronomic activities.

Except for a small but distinct ridge like jail range on the south eastern edge of the district, the whole of Mandya district is a plateau of heights ranging between 2500 to 3000 feet above sea level.

#### **1.1 Location & Geographical Area.**

Mandya comes under the group of districts known as the maidan (plain) districts and is situated in the southern part of the Karnataka State and to the North of Mysore district of which it once formed a part. The district lies between 76° to 19° and 77° 20° East longitude and 12°13° and 13°14° North latitude.

Mandya district occupies the 18<sup>th</sup> place in the State in respect of area with 4961 Sq.Kms., constituting 2.59% of the total area of the State.

#### **1.2 Topography**

The soil in the district is not known for its original fertile quality. Its water holding quality is low because of its highly bleached red sandy loam interspersed with some red clay loams. This poor quality of the soil is however made good to some extent by a well planned irrigation system which ensures perennial water supply to agronomic activities.

There is a good network of rivers and streams in Mandya district which ensures perennial water supply for the perpetual sustenance of living beings in the district. There are 5 rivers flowing through the district viz., Cauavery, Hemavathi, Lokapavani, Shimsha and Veervasihavani and six streams viz. Nidasaletore, Hebbala, Shima, Handihalla, Amruthur and Bindenahalli. A notable feature of this water spread is its contribution to the generation of electric power at Shivanasamudra, besides enabling a long irrigation canal system through the district.

### 1.4 FOREST :

The taluk has forest area of 24765 hectares, which is associated with the rocky hills. The taluk is yielding minor forest produce. The forest department has several plans and schemes to grow trees in the taluk/district, which helps to enrich the degraded forest and also preserve the ecology and environment of the taluk/district. The major forest resources available in the district are eucalyptus wood, tamarind, gallnut and bamboo.

There is scope for wooden furniture, wooden doors and windows, saw mills, and wooden packing cases, etc

### 1.5 Administrative set up.

Mandya district comprises of 7 taluks viz., K.R Pet, Maddur, Malavalli, Mandya, Nagamangala, S.R Patna and Pandavapura. This district was created on 1.7.1939 by bi-furcating Mysore district and Mandya town as Headquarters. There are two sub-divisions. Mandya Sub-division consists of Mandya, Maddur and Malavalli taluks while Pandavapura sub-division consists of K.R Pet, Nagamangala, Pandavapura and Srirangapatna taluks. Incidentally, these two sub-divisions have been adopted without any change by the District Industries Centre (DIC) for the purpose of administering industrial promotion/development work. From 1.4.1987 the general administration of the district including industrial development at the apex is being looked after by the Zilla parishad, which is an elected body. The President of the Parishad has been accorded the status of a Cabinet Minister of the State. The Zilla Parishad has a Secretariat headed by Senior Govt. Official belonging to IAS designated as Chief Secretary of the Zilla Parishad. Down below, there are various district level officers of the State Government to perform/execute the various regulatory/development functions assigned to them. The DIC is one such district level office headed by an official of the State Government designated as Joint Director with whom a number of functional Managers, Deputy directors and AsstDirectors work for the promotion and development of industrial and commercial enterprises in the district.

**Shivasamudram Island:** In the tiny island town of Shivasamudram the River Cauvery meanders to fall into cascading Shivasamudram Falls. This sparkling waterfall flows through the abundant sylvan forest of Karnataka in Deccan Plateau, plunges 320 feet into gorge into a spate, breaking into a cloud of misty foam.
