Brief Industrial Profile of Mahoba District

1. General Characteristics of the District

“Mahoba” A small district in Uttar Pradesh is famous for its glorious past. It is known for its bravery. The story of Veer ALHA and UDAL defines its importance in Indian history. There are various places which can create live glorious moment of that previous time. Mahoba is a city located in the Indian state of Uttar Pradesh, in Bundelkhand region. Mahoba is known for its closeness to Khajuraho, Laundi and other historic places like Kulpahar, Charkhari, Kalinjar, Orchha, and Jhansi. The name Mahoba is derived from “Mahotsav Nagar”, the city of great festivals. The Bardic tradition preserves three other names of the city: Kekaipur, Patanpur and Ratanpur. The existence of the sacred “Ram-Kund” and “Seeta-Rasoi” cave at the Gokhar hill here are said to be monumental to the visit of Rama who widely treated this hill region while in 14 year exile at Chitrakoot. It has population of 876055 (2011 Census), The district was carved out from the erstwhile Hamirpur district on 11 February 1995 by separation the erstwhile Mahoba Tehsil from it. In 2006 The Ministry of Panchayati Raj named Mahoba one of the country’s 250 most backward districts (out of a total of 640). It is one of the 34 districts in Uttar Pradesh currently receiving funds from the Backward Regions Grant Fund Programme (BRGF).

1.1 Location & Geographical Area.

Mahoba is located between latitude $25^{\circ} 07' N$ & $26^{\circ} 7' N$ and longitude $79^{\circ} 17'E$ & $80^{\circ} 21'E$. Northern flat plane along with river is less than 1000 feet above sea level and divide of hills or forest patches with a maximum height of 2000 feet from sea level. Nearest airport is Khajuraho 65 KM. Mahoba is connected by road to all major cities and road distance is: Chitrakoot-125 KM, Kanpur-155 KM, Jhansi-165 KM, Allahabad-245 KM, Lucknow-240 KM, Banda-52 KM and Kalinjar-130 KM.

1.2 Topography

The soil consists of the well known Mahoba varieties, Mar, Kabar, Parua and Rakar. Mar is often called blank cottar soil. It varies greatly in colour. It contains small lumps of kankar (small stone piece). Kabar range from a rich dark black to light brown. Its chief characteristics are its extreme adhesiveness, which causes it to quickly dry and cake in to hard blocks. Parua is a light coloured sandy soil, found in many forms. It is usually less rich in organic matter, but its finer texture makes it more responsive to manure and irrigation. Raker is refuse soil which occurs on sloping, where the action of water has tended to denude the earth of all its better qualities. May and the beginning of June are generally the hottest period of the year and maximum temperature in May is about $45^{\circ}C$ and minimum about $28^{\circ}C$. The heat during the summer is intense. The maximum temperature on individual days sometimes reaches $47^{\circ}C$ or

more. During Cold season minimum temperature sometimes drops down to about 2 or 3⁰C.

1.3 Availability of Minerals.

Mahoba district has Concrete Stone. The Granite is basically used in house building and road.
