Brief Industrial Profile of Chandauli District

1. General Characteristics of the District

Chandauli district derives its name from Chandra Sah, a Barhaulia Rajput who built the fort in the district. It was carved out from Varanasi district in 1997. Chandauli town is the district headquarters. Chandauli district is a part of Varanasi Division. Mughal sarai, a city in the district has the busiest rail station in the North Eastern Railways. The district has great natural beauty in the form of Chandraprabha Sanctuary and many waterfalls which include Devdari and Rajdari. District is not well developed particularly from view point of infrastructure and education. However, situation is slowly improving. Agriculture is the main occupation of the people of this district and rice and wheat are the main crops.

1.1 Location & Geographical Area.

The District is located in 24°56' to 25°35'N longitudes and 81°14' to 84°24' E latitudes at a distance of about 30 km south east of Varanasi. It is bonded on east by Bihar State, on the north and north east by Ghazipur District, on the South by Sonbhadra District, on the South-West by Mirzapur and on the North- West by Varanasi district. River Ganga separates the district from the districts of Varanasi and Ghazipur. Total geographical area of the district is 2541 Sq. Km

1.2 Topography

On the basis of geology, soils and topology, the district is subdivided in the following three regions:

- I. Chakia Plateau:** The region is comprised of southern part of Chakia tahsil. The 100 meter contour separates the region from Chandauli Plain. It is hilly tract with dissected surface.
- II. Chandauli Plain:** The region comprises parts of Chandauli, Sakaldiha and Chakia Tahsil. The area under Chandauli tahsil is comparatively low which causes water logging during rainy season. Major part of the region is devoid of streams.

III. Ganga Khadar: It is narrow belt along the Ganga river extending from one end of the district to the other end. Surface is low lying and subject to inundation during flood. Approach of flood water delimits the boundary of this region.

1.3 Availability of Minerals.

Only Sand is available as a minor mineral in the district Chandauli which is used for construction of buildings.

1.4 FOREST

According to Revenue Department, the area under forest is 77,400 Hectare and almost ninety nine percent of it is found in Naugarh C.D. block of Chakia tahsil. There are forests on ridges of flat hill tops and foot hills but trees found in this region are generally of poor quality. Salai, Piar, Mahuwa, Tendu trees apart from usual trees are mainly found in the district. Dry green vegetation can be seen on the plateau region.

The Naugarh C.D. block is covered with dense forest in which trees of Sakhu, Sagaun, Sheesham, Mahuwa, Aonla etc. are mostly found. Wood obtained from these trees is very useful for building construction, playing materials and for making wooden toys. The wax and honey is received from forest area in large quantity. Besides these, the Tendu leaves are also found in huge quantity, which is exported to other district also for making 'Beedi'.

1.5 Administrative set up.

The deputy commissioner heads administration of Chandauli district. He is top administrator and is responsible for good administration and planned development of the district. The district has been divided into three tehsils and nine blocks. Block development officer is the in-charge of the block. To maintain the general administration of the district there is one additional District Magistrate. Administrative set up of the district also includes three Sub-Divisional Magistrates, one each of the Tehsils.

3.6 Potential for Development of MSMEs

To support the agriculture sector there is a strong need to develop industrial sector, which can enhance the demands for raw materials for processing industries. The main processing industries operating in this district are:

1. Handicrafts industry
2. Khadi and handlooms
3. Agriculture and livestock based industries
4. Forest produce based
5. Fibre based other than handlooms
6. Chemical and allied product based
7. Minerals based general engineering industry

Cottage industry, trade and services have traditionally been the other important sector contributing to the economy of the district, as has inward remittances by workers, both inland and overseas. Silk sarees weaving, electric fan manufacturing, fruit preservation, small wooden toy making etc have been traditionally undertaken. Most of these activities are in a state decline due to competition of similar products at much cheaper rates.
