Brief Industrial Profile of Solapur District

1) General Characteristics of the District & Brief History:

The Solapur District was ruled by various dynasties such as Andhrabhratyas, Chalukyas, Rashtrakutas, Yadavas and Bahamanis. Research work shows that the name SOLAPUR is derived from the inscriptions of Shivayogi Shri.Siddheshwar of the time of the Kalachuristis of Kalyani, that the town was called 'Sonnalage' which came to be pronounced as 'Sonnalagi'. The town was known as Sonnalagi even upto the times of Yadavas. A Sanskrit inscription dated 1238, after the downfall of the Yadavas found at Kamati in Mohol shows that the town was known as Sonalipur. One of the inscriptions found in Solapur fort shows that the town was called Sonalpur while another inscription on the well in the fort shows that it was known as Sandalpur. During the Muslim period, the town was known as Sandalpur. It is therefore most probably that during the course of time the name Solapur was evolved by dropping 'na' from the name Sonalpur. Subsequently the British rulers pronounced Solapur as Sholapur and hence the name of the district. The present Solapur district was previously part of Ahmednagar, Pune and Satara districts. After the State reorganisation in 1956 Solapur was included in Mumbai State and it became a full fledged district of Maharashtra State in 1960.

1.1) Location & Geographical Area:

Geographically Solapur is located between 17.10 to 18.32 degrees north latitude and 74.42 to 76.15 degrees east longitude. The district is situated on the south east fringe of Maharashtra State and lies entirely in the Bhima and Seena basins. Whole of the district is drain either by Bhima river or its tributaries. The district is bounded on the north by Ahmednagar and Osmanabad districts, on the east by Osmanabad and Gulbarga (Karnataka State) districts, on the south by Sangli and Bijapur (Karnataka State) and on the west by Satara and Pune districts. There is no important hill system in the district. Only in the north of Barshi Taluka several spurs of Balaghat range pass south for a few kilometres. There are also a few scattered hills in Karmala, Madha and Malshiras Talukas. The district in general has flat or undulating terrain. The low table land and small separate hills in Karmala and Madha Talukas act as a Watershed between Bhima and Sina rivers. The district covers geographical area of 14844.6 sq.kms. which is 4.82% of the total area of Maharashtra State. Out of the total area of the district 338.8 sq.kms (2.28%) is Urban area whereas remaining 14505.8 sq.kms. (97.72%) is Rural area. Areawise Karmala taluka is biggest covering an area of 1609.7 sq.kms and North Solapur is smallest covering an area of 736.3 sq.kms.

1.2) Topography

1.2.1) Climate:

The climate of the district is very good due to high lands on the western part and gradual slope towards east and north, and on the western side with moderate summer from April to June and good winter from November to March. The climate during rainy season from the middle of the June to end of September is cool and pleasant followed by a hot spell of October. The temperature of the district goes upto 46°C in summer and in winter it falls down to 9°C.

1.2.2) Rain Fall:

The rainfall in this district is more or less uniform in the past decade. The average rainfall of the district is between 500 mm to 650 mm.

1.2.3) Soil:

The soils of the district can broadly be classified into three types.

- Black
- Coarse Gray
- Reddish

According to topography the district is divided in three natural zones.

- Eastern Zone: This comprises of Barshi, North Solapur, South Solapur and Akkalkot Talukas. The soil is medium to deep black and of rich quality. Jawar, Bajra and Pulses are the main crops of this zone.
- Central or Transitional Zone: Mohol, Mangalwedha, eastern part of Pandharpur and Madha Taluka are covered by this zone. Like to moderate soil and uncertain rainfall marks this zone. Both Kharip and Rabbi Crops are grown in this part.
- Western Zone: Karmala, Sangola and Malshiras Talukas and western parts of Pandharpur comes under this zone. Shallow and poor type of soil, not retentive of moisture marks this part. Scanty and uncertain rainfall. Rabbi crops mainly grown in Karmala, Pandharpur and Madha Talukas while Kharip crops like Bajra and Groundnut are grown in Sangola and parts of Malshiras talukas.

1.2.4) Rivers:

The district has good agricultural land and this is fed with River - Bhima, Also the other Sub-rivers - Neera, Mann, Seena, Bhogawati plays a important in giving necessary water for the district.

1.3) Availability of Minerals:

Limestone.

THOUGH over the whole district the rock is trap, nodular lime stone or *kankar* is everywhere abundant. At Sholapur unslaked lime fit for whitewash sells at $\frac{1}{4}d.$ the pound (Rs. 15 the *khandi*), and slaked lime used in building at $\frac{5}{32}d.$ the pound (Rs. 9 the *Khandi*).

Building Stone.

The building stone of the district is trap or basalt found either in quarries or in boulders strewn over the *murum* plain. The stone used at Sholapur is brought less than fifteen miles from Chincholi, Darphal, Haglur, Kegaon, Kondi, Lamboti, Pakni, Savleshvar, and Shelgi. The Savleshvar quarries supply slabs four to six feet long, and the Chincholi and Lamboti quarries large stones for rollers, five feet long and about three feet in diameter. Rubble is taken from quarries about a mile from Sholapur, the best of which is owned by one Bhau Ghongade. In Barsi trap stones four to six feet long are brought ten to eighteen miles from Gharipuri,

Mohol, Ropla, and Shelgaon. The building stone used in the town of Barsi is brought from Vadi three miles north-west of Barsi and is mostly of small size. Within sixteen miles of Pandharpur are quarries of good black hard stone at Babulgaon, Bhalvani, Gursal, Korti, and Penur, and in the hills which form the southern boundary of the Sangola sub-division in the south-west of the district. Some of these quarries yield stone of any size. Except a few Marathas the stonecutters and quarrymen are Vaddars who always work by contract and earn 1s. 6d. to 2s. (Re. $\frac{3}{4}$ -1) a day. The cost varies greatly according to the size, the quantity taken, and the season of the year. At the quarries rubble generally costs 2s. to 3s. (Rs. 1-1½) the hundred cubic feet.

Road Metal.

Road metal is commonly made from the boulders which strew the *murum* plains in various parts of the district. At Sholapur it is chiefly taken from quarries, and at the quarry it costs 7s. to 8s. (Rs. 3½ - 4) the hundred cubic feet.

Tiles and Bricks.

Sholapur houses are generally built with flat roofs covered either with lime or mud. In mud-roofed houses layers of brick are laid over the planking and are covered with the white earth which is found in almost every village, or with *karal* a kind of sandy oily loam. A few years ago the Government offices were the only tiled buildings in Sholapur, but of late people have begun to use tiles. In some cases they use the flat local tile and the round tile together, the round tile being laid on the top of the flat tile to prevent leakage through the joints. Clay fit for making bricks and tiles is found near many stream and river banks. The tiles cost 8s. to 12s. (Rs. 4-6), and the bricks, which are generally rough and brittle, cost 12s. to £1 4s. (Rs. 6-12) the thousand.

Charcoal.

In the Sholapur. sub-division at Bhanddarkavtha, Halgur, Telgaon, Venchur, and several other places small quantities of *babhul* wood charcoal are made. At Sholapur charcoal sells at $\frac{3}{8}$ d. the pound (Rs. 25 the *khandi*) and at Pandharpur and Barsi at $\frac{9}{32}$ d. the pound (Rs. 17-20 the *khandi*). Charcoal is largely imported from the Satara and Kolhapur states of Jamkhadi; Miraj, and Sangli. As it is safe from the attacks of white ants and other insects, the wood of the *nim*, *Azadirachta indica*, is largely used for building. Its light yellow colour deepens with age. Besides as fuel and in making carts, sugarcane mills, ploughs, and other field tools, *babhul* wood is largely used for building. It is of a deep reddish colour and is very lasting. For building purposes *nim* and *babhul* wood sell at nearly the same rates 4s. to 5s. (Rs. 2-2½) the cubic foot; as fuel *babhul* wood sells at $\frac{3}{32}$ d. to $\frac{3}{10}$ d. the pound (Rs. 6-12 the *khandi*).

1.4) Forest:

The forest availability is also the one criteria in the development process as in the case of fire wood which is still be used as afuel in rural house holds.

The area under forest is very much essential for the limiting the green house gases. The total forest area in Solapur Dist is 60 thousand hectares.

1.5) Administrative Set Up

1.5.1) Population:

In 2011, Solapur had population of 4,315,527 of which male and female were 2,233,778 and 2,081,749 respectively. In 2001 census, Solapur had a population of 3,849,543 of which males were 1,989,623 and remaining 1,859,920 were females. Solapur District population constituted 3.84 percent of total Maharashtra population. In 2001 census, this figure for Solapur District was at 3.97 percent of Maharashtra population. The Growth rate of population is 12.10 percent compared to population as per 2001. Solapur District Density 2011. The initial provisional data released by census India 2011, shows that density of Solapur district for 2011 is 290 people per sq. km. In 2001, Solapur district density was at 258 people per sq. km. Solapur district administers 14,895 square kilometers of areas.

1.5.2) Occupational Structure:

Solapur is the home of Handloom and Powerloom weaving industry which provides employment to a large number of workers. There are around 6000 powerloom industries operational in the district. Out of these 300 establishments are registered under Mumbai Shops and Societies Act 1948 and the other 3000 are registered under factories Act 1948. There are about 25000 Powerloom and about 30000 workers are employed. On the Jackard powerloom the main production is Chadders, Towels and Napkins. Most of the powerloom industries are operational in day shift only from 8 a.m. to 6 p.m. with two hours break for lunch and recess. Some of the industries are operational in two shifts from 8.00 a.m. to 4.00.p.m. and from 4.p.m. till 12.00 midnight.

The employees working on the handloom/powerloom machines mainly manufacture Jackard Chadders, Towels and Napkins. These workers receive their payments on the 'Piece Rate' basis, based on category of the product. As the 'Piece Rates' of various products are different there is variation in workers earnings. As per the traditional piece rate system the worker gets Rupees 70 to 90 per day on an average. Beedi industry is the second important industry in Solapur. There are 115 units of 29 various beedi factories. In these 115 units there are about 70000 lady workers. and 1725 factory workers in the district.
