1. General Characteristics of the District

District Barnala has been carved out of district Sangrur in 2006. Barnala city is a medium sized town with all the amenities available within commutable distance. Its economy is supported by neighboring agriculturally rich villages like Thikriwal, Uppli, Pherwahi, Dhanaula, Amla Singh Wala. It has diverse population supporting local industries and food business. As Barnala has become district now, the investors will invest more on the development of Barnala. Now this district consists of 124 inhabited villages and 5 towns.

1.1 Location & Geographical Area

District Barnala is surrounded by districts of Ludhiana and Moga in the north, Mansa in the south, Sangrur in the east, Bathinda in the West. It is situated between 30° 23' North and 75° 33' East. It has a mean elevation of 227 metres (745 feet).

1.2 Topography

The topography of the district is even. It is mostly a plain of alluvial type. It also has loam to heavy loam and sand to sandy loam soils in certain parts of the district. Soil is rich in nutrients and suitable for crops like wheat, Paddy, Potato and vegetables etc.

1.3 Availability of Minerals

The district is poor as regards mineral wealth. A few minor minerals are, however, found. The area forms a part of Indo-Gangetic alluvial plain. The sediments comprising the alluvium are sands of various grades, kankar and clay. Occurrences of gravels and pebbles have been reported from some of the drilling undertaken in the district. Blown sands also occur as dunes in the area specially in the western, northern, and north-western parts.

1.3.1 Kankar: It is massive, hard and compact nodular calcareous material light grey to dark grey. Sand, silt and clay are found associated with *kankar*. In general, its thickness varies from

a few centimeters to that of a metre. It occurs mostly in the form of isolated beds and pockets. It can be used for white washing and road metalling.

1.3.2 Saltpetre: Saltpetre is a general trade name for all the nitrates of sodium, potassium and calcium. Nitrates of potassium are known as nitre of saltpetre whereas those of sodium are called sodanitre, caliche or chile saltpetre. It appears on the surface as an alkaline efflorescence during summer month. It is used in manufacture of gun powder, preparation of agricultural fertilizers, etc. Occurrences are reported from some villages in the blocks of Barnala

1.3.3 Alkaline Earth: Alkaline soils in the area occur as thin surface coatings of about 6 cm thick layers in the surface. These soils are mainly found along the floodplains of the buried channels in the area.

1.4 Forest

An area of 2000 hectare is covered under protected forests, which is 0.04% of the total forest area of the State. It also shows that the district is lacking in forest resources.

1.5 Administrative set up

For administrative purpose, the district has been divided into 2 Tehsils namely Barnala & Tappa and 3 Sub-tehsil namely Dhanaula, Mahal Kalan & Bhadaur. There are 3 blocks namely Barnala, Sehna and Mahal Kalan. There are 124 inhabited villages and 5 main towns in the district.

4. Existing Clusters of Micro & Small Enterprises

4.1. *Detail of Major Clusters*

4.1.1 Manufacturing Sector:

-

4.1.2 Service Sector:

The units involved in the activity of Repair & Servicing of Agriculture Implements are concentrated in the nearby areas of Barnala city, which are mainly in unregistered sector.

4.2. *Details of Identified clusters:*

The district has no identified cluster.

5. General issues raised by Industrial Associations of Barnala

- (a). DIC should be located at Barnala.
- (b). Insufficient supply of skilled labour.
- (c). High rate of electricity charges
- (d). Insufficient transport facilities
- (e). There should be Industrial Focal Point or Industrial Area/Estate with proper infrastructural facilities in the district.
- (f). The complex procedural formalities to deal with different industrial and financial agencies/departments should be simplified.
