# Brief Industrial Profile of Lohardaga District

**1. General Characteristics of the District:** The district is divided into two broad physical divisions viz : (i) the Hilly Tract and (ii) the Plateau Region. The hilly tract is extended in the West and North-Western parts of the district which includes the parts of Kisko, Senha and Kuru development blocks. The high hill tops of this region are known as Pat. The region is covered mainly with sal forests. The Plateau region is a part of the Gumla plateau, comprised with entire part of Lohardaga and Bhandra development blocks and some parts of Senha, Kuru and Kisko developments blocks.

The District of Lohardaga is located in the south western part of Jharkhand State between 32°30" to 23°40" north latitude and between 84°40" to 84°50" east longitude covering an area of 149100 Hecter in the tribal belt of Chotanagpur plateau

There is a total absence of large scale industries in the district. People are engaged in small scale industries like making of stone chips, bricks, soaps, oil, candles, aluminums goods, wooden furniture, earthen pots, bamboo baskets, weaving of cloths and carpets etc. The district is not having good network of communication. No national highway passes through the district and Lohardaga town is located on the state highway between Ranchi and Rourkela. Lohardaga is also connected with Ranchi by a metre gauge railway line.

With the available resources and potentialities, for socio-economic growth, the district deserves proper attention for resources planning which could magnify the district in every field of development.

**1.1 Location & Geographical Area:**The District of Lohardaga is located in the south western part of Jharkhand State between 32°30" to 23°40" north latitude and between 84°40" to 84°50" east longitude covering an area of 149100 Hecter in the tribal belt of Chotanagpur plateau. The annual average temperature is 23° centigrade and the district receives an annual average rainfall of 1000-1200 mm. The rainfall increases from west to east.

## 1.2 Topography

The district spreads from 32°30" to 23°40" north latitude and between 84°40" to 84°50" east longitude

**1.3 Availability of Minerals.** Geologically the area is comprised with Archean Granites and Gneisses. In the uplands considerable thickness of late-rite of Pleistocene age is found in the Granite and Gneisses tracts. Alluvium of recent to sub-recent age is found in the river valleys. The most important mineral of the district is bauxite. Other minerals which are found in the district are feldspar, fire clay and china clay and have less economic importance.

#### **5. General issues raised by industry association during the course of meeting**

Many a times meetings have been held with Industries Associations to discuss their problems and issues. The same old problems like uninterrupted power supply, availability of key raw materials, timely availability of cash credit, etc. have been raised. Assurance on the above issues were given by the head of the concerned organizations and institutions, unfortunately, no improvement has appeared in sight as yet. Although, there is hardly any improvement but the concerned units is pulling on somehow or the other. An improvement in this respect is highly solicited.
