Brief Industrial profile of Tamenglong District

1. General Characteristics of the District:

The northeastern block of India comprises of seven states, popularly known as seven sisters. Manipur is one of the states, which has been covered with fame and is known in every corner of the globe for its pure and rich cultural heritage also for Sports. Out of the state's nine districts, Tamenglong is located along the western boundary of the state.

Tamenglong is a hill district coved out of the erstwhile Manipur central district in 1960 and change its name to present Tamenglong district in 1983.

Tamenglong is inhabited by majority Zeliangrong Naga tribe (comprising of Rongmei, Liangmei, Zemei and Pumei) and Kukis, besides minority Hmars, Chirus and Khasis. Racially or physically and linguistically Zeliangrongs are Tibeto-Burman (Indo-Mongoloid) of Sino-Tibetan family of the Mongolian race. Based on history it is assumed that Mongoloid groups including Zeliangrong Nagas were inhabiting the upper course of the Yangtze and Howang Ho rivers in China in the prehistoric times.

Tamenglong HQ can be reached through Roadways. From Imphal (State Capital) three buses depart at 6.00 am weekdays (except Sunday) to reach Tamenglong the same afternoon.

Tamenglong is also known as the land of the Hornbill. Great pied Hornbill (*Buceros bicornis* homrai), Indian pied Hornbill (*Anthraceros malabaricus malabaricus*) species are found.

1.1.1 Location & Geographical Area:

The district is bounded by Assam in the west, Churachanpur district in the south, Senapati in the East & North. The district lies between 93 degree, and 94 deg, East Longitude and 24,30 deg, & 25,30 deg North Longitude and located at an average altitude of 1260 meters above mean sea level. The geographical area of the district is 4,391 Sq.Km.

1.1.2 Topography:

The district is hilly with terrains and has a very steep hill side and it is entirely composed of hills, ranges and narrow valleys. The hilltops and valley sides are dotted with small hamlets, located at strategic points. The land was believed to have been formed due to orogenic movement during cretaceous and Eocene period. The main rock formations are sandstone, shale, schist. Due to weak and fragile nature of rocks and high gradient of the hill Tamenglong District is blessed with virgin forests, exotic orchids, rare and endangered plants, and wildlife. The forests can be grouped as Tropical-Ever-green forest, Sub-tropical forest and Bamboo brakes. Slopes, landslide is a common phenomenon in the whole district in rainy season.

1.3 Availability of Minerals:

The district has appreciable deposits of oil & natural gas, but exploration not yet started.
